

Benefits of Using Adhesives and Sealants for Metal Fabrication

Reducing Your Costs...Expanding Your Options

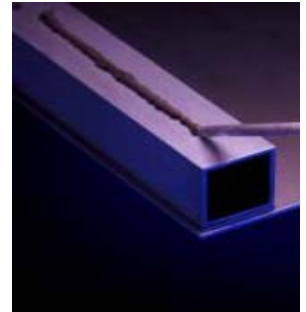

Enhance the Aesthetic Design of your Product

- Fasten coil coated metals without marring painted surfaces
- Eliminate read-through, burn marks and discoloration
- Eradicate part distortion caused by thermal jointing methods
- Eliminate need for secondary operations (e.g. grinding)
- Avoid unwanted visible joint lines
- Improve appearance by color matching bond line using paintable adhesives

Streamline your Process and Save Money

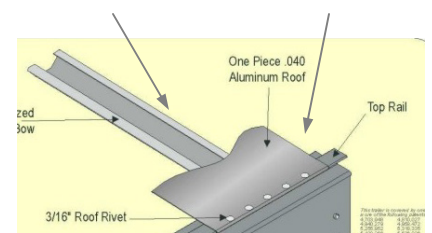

- Join objects after they have been painted
- Reduce the need for clamps, fixtures and jigs
- Decrease the need for surface preparation

Improve your Product and Design with New Materials

- Join dissimilar substrates with ease, including non-metallic substrates to metal
- Enable use of thinner, lower gauge metals
- Reduce Noise, Vibration and Harshness (NVH)
- Retain thermal and electrical conductivity
- Limit risk of corrosion

Roofbow Bonding Sealing Roof Joints

Produce Environmentally Friendly Products

- Facilitate easier recycling
- Achieve cleaner, more convenient disposal
- Enable reduced waste via custom formulations
